Major Highlights

Motivation is to understand how the last recession of 2007-09 impacted city finances

Using actual financial data, this report tracks trends of a host of revenue indicators

Financial data includes both governmental and proprietary funds, 2007-15

Data has been broken down into seven ranges by Total Annual Revenues

Major variations across the seven categories

Cities with lower annual revenues witnessed gradual revenue decline, although there were years which witnessed increases

Cities with smaller annual budgets witnessed larger percentage declines

Reliance on property tax increased across all the categories

Debt witnessed decline in the period following the recession but increased from 2013 onwards

Intergovernmental funds helped larger cities more than smaller cities

Charges for fees increased across all city sizes

Cities with the largest budgets held steady through the recession and in the post-recession recovery period

Introduction

The COVID-19 pandemic has, within a very short time, slowed down the economy to unprecedented levels, which the nation and Iowa have not witnessed in modern times. Early estimates indicate that the nation has lost over 41 million jobs in a span of about 2 months. Iowa has lost over 250,000 jobs and unemployment rate at the end of April is over 10 percent. Needless to state, this economic contraction is having impacts on businesses, consumers and government. For local governments (cities, counties, school districts, etc.) this means an immediate impact on their revenue streams. Local government officials, elected and appointed, are trying to better understand the scale of the budgetary impacts. However, it will take time to get a clear understanding of the slowdown's negative effect on revenues. Under the circumstances, we examine the fiscal impacts of the last major recession, 2007-09 to allow local governments to assist in anticipating likely scenarios they may have to deal with. Using actual finance data for cities during 2007-15, we undertook a trend analysis to estimate changes in the major revenue sources. The major goal of this analysis is to expand understanding of how city finances, especially revenues, were impacted during the last major recession. It is not a prediction of the scale of the fiscal impacts due to the ongoing economic slowdown. It must be acknowledged that the root cause of recessions tend to be very different, and the economic effects as a result differ. However, from the perspective of impacts on municipal finances, irrespective of the cause, examining past post-recession performance may give some key insights and information that may assist local officials to better understand the likely impacts and use that information in their decision-making.

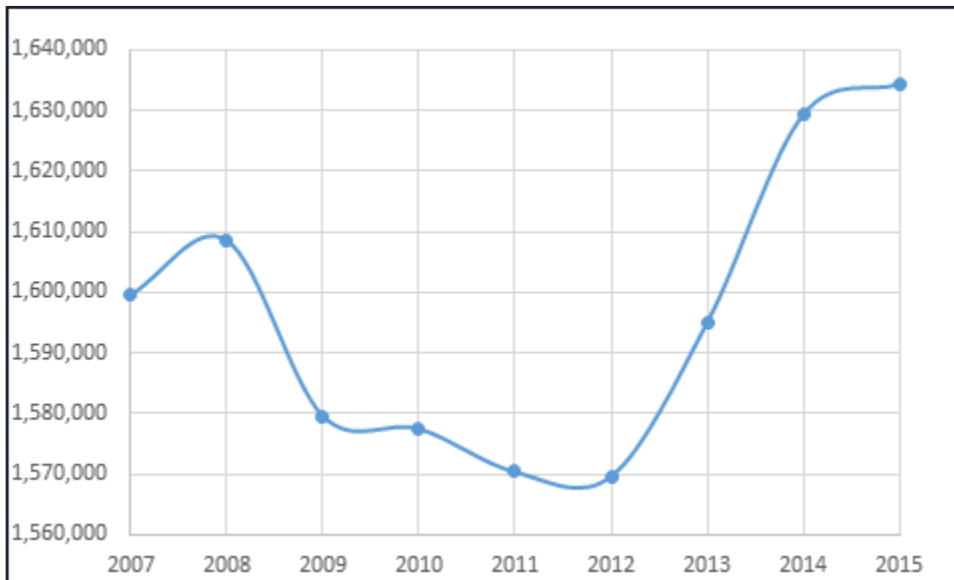

Economic situation in Iowa, 2007-2015

To provide context to how the great recession affected local government finances, especially revenues, a brief snapshot of how the overall Iowa economy was impacted helps to compare with the ongoing slowdown. Iowa's economy declined by 5.9% during the Great Recession. Unemployment increased to 112,585 in June 2009, equivalent to 6.6%, at which point 50,358 jobs had been lost since December 2007.

The U.S. economy officially entered into a recession in December 2007, triggered by the housing crisis, and then affecting the financial sector. While Iowa was not impacted initially due to robust agriculture and strong exports, several natural disasters including historic flooding and tornadoes aggravated the economic conditions. Unemployment rate increased from 3.7 percent in January, 2007 to 6.6 percent during, June through August, 2008 following which it started to decline and was at 3.7 percent in January, 2015. The state regained the jobs lost during 2007-12 over the next few years, 2013-15 as the state continued on a path of positive economic growth. Figure 1 illustrates the employment changes in Iowa during 2007 through 2015. Overall, the magnitude of the slowdown of the state economy lower compared to the U.S. economy.

Population during this period also witnessed positive growth with approximately 85,200 new Iowans during 2007-15, about a 3 percent increase over 8 years. This increase coupled with the increase in employment illustrated in Figure 1 indicates a rise in total household incomes, which positively impacts the revenue base of local governments in Iowa. Based on the spatial distribution, most of the increase was concentrated in the major urban centers of the state.

Local Government Finance: City Revenues

Local governments rely on various sources to generate revenues they need to provide services to their residents. The major ones include property tax, sales tax, local option sales tax, income tax, intergovernmental transfers and borrowings from external sources. It is important to understand the trends in each of these revenue sources and how the last big recession impacted them. This could provide valuable lessons to those making projections for the short and medium term future. We present the data in seven categories, defined by the magnitude of the total revenues of the cities in Iowa - less than \$99K, \$100K-\$499K, \$500K-\$1.49M, \$1.5M-\$2.49M, \$2.5M-\$9.9M, \$10M-49.9M and greater than \$50 million. The motivation to create groups based on total annual revenues was primarily driven by the focus of this study, which is to understand the impact of the great recession during 2007-2009 on city budgets. While it is obvious that smaller cities tend to have smaller budgets and larger one tend to have bigger budgets, the data reveals that it is not always the case. There are instances where small cities have larger budgets, driven primarily by the presence of business-like operations which include city-run utilities (water, electric, etc.), hospitals, recreation centers etc. To assist cities in identifying their group, we created a table (Table 1) that includes both the total annual revenue estimates as well as population range based on 2010 census.

Data for this study was accessed from the Iowa Department of Management's database. Each year cities submit to the state Auditor budget estimates for the following year during which they also report the actual estimates of the city for 2 years prior to the current period. For example, a city submitting a budget for FYE 2020-21 will also include in the budget the actual revenue and expenditure estimates for FYE 2018. We used the actual revenue data from 2007-2015 which spans the period from prior to after the recession for 5 years. This allows an understanding of the trends as the recession hit and then the following years of recovery and how that impacted city revenues.

Note that because this dataset includes the "proprietary," or commonly known as business-like operations mentioned above, the metrics presented are not isolated only to traditional governmental sources, mostly in the general fund. This may, in some instances, impact the ratios for some revenue streams. Property taxes, local option sales taxes and road use tax fund dollars are examples of those daily operational sources whose magnitude may appear smaller for communities or groupings that have significant amount of proprietary operations. The index presented in two tables for each of the sub-categories of cities allows tracking the percentage change in each individual revenue categories during 2007-15. For cities interested to access the actual data, we suggest contacting the communicating author, the information is provided at the beginning of the report.

What this study is and what it is not?

This study examines city revenues during 2007 through 2015. Using simple analytics, we demonstrate trends, ratios, and indexes that are helpful in understanding how the last big recession affected city revenues in cities of different sizes. The hope is that it allows local officials to anticipate how the ongoing slowdown may affect their finances, especially revenues as they plan for the short and long-term future. It does provide a sense of the scale of the impacts although that may vary due to the severity of the economic conditions we are currently experiencing. It is not an accurate forecast or prediction of how revenues will trend during and after the ongoing economic slowdown.

How to use the information presented in the report?

Identify which category your city belong by referring to Appendix B where cities are listed by name, year and total annual revenues, from 2007-2015. Due to space constraints, the table includes data for 2007, 08, 09, 10, 13, and 15. Once you have identified a city of your interest for any particular year, refer to the category it belongs. The categories are - less than \$99K, \$100K-\$499K, \$500K-\$1.49M, \$1.5M-\$2.49M, \$2.5M-\$9.9M, \$10M-49.9M and greater than \$50 million. Use that information to access the findings within the report.

Presented in this report are seven sections (for each of the seven sub-groups of cities described earlier) that include summary of the total aggregated annual revenues, the rate of change an annual basis, from 2007 through 2015, share of total revenues from the major sources, an index to track change over time by each revenue source and the rate of growth within each revenue source.

Population versus Total Annual Revenues

The data presented is broken down into seven categories. The categories are defined based on the total annual revenues of cities. This was done primarily to emphasize that cities with similar population do not have equivalent annual revenues. While that is more often the case, there are numerous instances of relatively smaller populations having significantly higher revenues. In order to create a ‘peer’, we believe that the size of the budget provides more insight compared to the population. This is mainly due to the presence of services, which are provided in a ‘business-like’ manner. Usually, they include utilities, recreational services, hospital etc.

Table 1. City groups used in the study - Population range in each year, 2007-15

Year	Total Annual Revenue	Less than \$99K	\$100K-\$499K	\$5K-\$1.49M	\$1.5M-\$2.49M	\$2.5M-\$9.9M	\$10M-\$49.9M	Greater than \$50 M

Cities with Total Annual Revenues Less than \$99.9K

Highlights

- Witnessed stagnant or decline in total revenues across major revenue sources through 2007-15
- Property tax is the major source of revenue followed by governmental fund transfers and charges and user fees during 2007-15
- Property tax revenue growth remained stagnant, reliance on it increased over time.
- Charges and fees declined significantly over the period 2007-15
- Intergovernmental revenues spiked for couple of years but was mostly stagnant or declined.
- Very low levels of debt
- Stability of city taxes without much decline over 2007-15

Cities with Total Annual Revenues \$100K-\$499K

Highlights

- Witnessed stagnant revenues from 2007-2011 and decline thereafter until 2015
- Charges and fees most important source of revenue that continued to hold its share at about 35-37 percent. This is mainly due to the total revenues including the business like operations of the city (water, sewer, electric, hospitals, recreation facilities etc.)
- Property tax is the second major source of revenue, the reliance on it increased during 2007-2015
- Property tax revenue growth remained stagnant, reliance on it increased over time.
- Intergovernmental revenues spiked for couple of years but was mostly stagnant or declined.
- Very low levels of debt
- Stability of city taxes without much decline over 2007-15

Cities with Total Annual Revenues \$500K-\$1.49 M

Highlights

- Witnessed decline in total revenues across major revenue sources until 2012, followed by increases in the three subsequent years.
- Charges and fees as well as property taxes, and intergovernmental transfers are the major revenue source.
- Charges and fees share as well as the total dollar amount remained flat during 2007-15
- Property tax revenue growth was 37%. Share increased to about 20%.
- Intergovernmental revenues declined over the entire period
- Level of debt proceeds remained flat
- City taxes had a small share and grew by about 20% during 2007-15
- Total transfers also remained stable
- Very low levels of debt.

Cities with Total Annual Revenues \$1.5 M - \$2.49 M

Highlights

- Witnessed periodic rise and fall in total revenues with almost no change during 2007-15.
- Charges and fees as well as property taxes, debt proceeds and intergovernmental transfers are the major revenue source.
- Charges and fees share declined as well as the dollar amount during 2007-12
- Property tax revenue growth remained stagnant, reliance on it increased marginally over time at about 5%
- Intergovernmental revenues spiked during 2010-12 and then declined.
- Level of debt proceeds remained flat except for a spike in 2015
- City taxes had a small share and grew very minimally during 2007-15
- Total transfers also remained stable

Cities with Total Annual Revenues \$2.5 M-\$9.99 M

Highlights

- Witnessed increase in total revenues across major revenue sources through 2007-15
- Charges and fees as well as property taxes, debt proceeds and transfers are the major revenue source.
- Charges and fees declined slightly during 2007-12 and was at the same level for the rest of the years under study.
- Property tax revenue growth remained stagnant, reliance on it increased marginally over time at about 21%
- Intergovernmental revenues spiked during 2009-12 and then declined. Approximately 27% growth during 2007-15.
- Level of debt proceeds increased and declined periodically
- City taxes had a small share but grew about 13 % during 2007-15.
- Total transfers also remained stable

Cities with Total Annual Revenues \$10 M – \$49.9M

Highlights

- Witnessed periodic rise and fall in total annual revenues. Overall, during the entire period, there was minimal decline in revenues.
- Charges and fees as well as property taxes, debt proceeds and transfers are the major revenue source.
- Charges and fees declined significantly during 2007-12 and was at the same level for the rest 3 years
- Property tax is the major source of revenue followed by governmental fund transfers and charges and user fees during 2007-15
- Property tax revenue growth remained stagnant, reliance on it increased marginally over time.
- Intergovernmental revenues mostly stagnant or declined.
- Level of debt proceeds increased and declined periodically
- City taxes had a small share but grew about 26 % during 2007-2015 without much decline over 2007-15
- Total transfers also remained stable

Cities with Total Annual Revenues Greater than \$50 million

Highlights

- Witnessed growth in all years except 2013 when there was a significant decline in total revenues.
- Property tax remained a stable source all through and witnessed almost 50 % increase over 2007-2015. The only decline happened in 2008 when the property tax revenue fell by about 4 percent.
- Charges and fees increased significantly over the period 2007-15
- Intergovernmental revenues almost doubled during this period.
- Very low levels of debt proceeds as new borrowings declined over time
- Other city taxes increased almost 70 % over 2007-15. Only exception was 2013 when it declined compared to previous year. Share of total revenue remained stable at about 5 %.
- Total transfers' share remained steady as the amount increased by about 57% during the period.

Concluding Observations

We set out to use historical data to help improve understanding of how the last big recession of 2007-09 affected city finances in Iowa. While many of the trends and ratios were on expected lines, we observed significant variation between cities of different sizes (or budgets). It is important to remember that as of writing, the ongoing recession seems to have eclipsed the great recession in scale. The next 6 months may provide a more accurate picture of the trajectory of the economy. However, the study provides insight into the fiscal impacts of the recession on cities of different sizes. It is recommended that the right city category be identified before drawing any inferences from the data. In addition, the local context (population and socioeconomic changes) must also be factored in to aid in understanding the change in individual revenue sources. Cities that have major business-like operations also need to be careful while interpreting the overall trends.

Appendix A

Definitions and breakdown of revenue sources

CLASSIFICATION OF REVENUES BY SOURCE

Classification of revenues by source provides information about the resources obtained. Revenue sources are assigned four-digit codes in the Uniform Chart of Accounts. The first digit, a four (4), indicates the number series is a revenue source. No other series of numbers in the account code structure will start with this same digit, apart from three-digit fund numbers. The second digit refers to a major area. Major areas are broader categories of types of revenues. Minor areas are more detailed groupings within the major areas. Minor areas contain line-items, which indicate fairly specifically the resource obtained. Thus, a four-digit source code identifies an item as a revenue, a specific major area and line-item.

Further, the account code structure provided here is *flexible*. Cities can add, expand or consolidate source accounts to meet their specific needs within each major area.

Components of Account Code Structure Relating to Revenues by Source:

Fund – Describes a unique accounting entity whose operations are accounted for by a separate set of self-balancing accounts. Includes General Fund, Special Revenue Funds, Debt Service Funds, Capital Funds, Permanent (Perpetual) Funds, Enterprise and Utility Funds, Internal Service Funds and Fiduciary Funds.

Function (*also referred to as Department or Program*) – Corresponds to the new nine major program areas and business type activities resulting from the changes made to implement GASB 34. Describes the department or sub-department within the city responsible for or benefiting from an activity.

Type – Corresponds to the four types of revenue resulting from the changes made to implement GASB 34. The transactions in certain revenue sources may not all be one type. For example: unrestricted interest earned is always a type 4, but interest that is restricted will be a type 2 or 3 depending on whether the interest is restricted under an operating grant or contribution or a capital grant or contribution. For most revenue sources that may not all be one type the options are listed. However, rarely, a city may receive a grant that has no restrictions. In that instance the transaction would be a type 4. The appropriate type should be attached to each transaction based on the particulars of the transaction.

Source – Corresponds to the major area of revenue and the line-item account that provides more detail on the type of revenue.

Examples:

1. Example of a revenue account coding for a building permit issued by the city's building inspector and paid to the city by a citizen:

Fund	Function	Type	Source
<i>General Fund</i>	<i>Inspections</i>	<i>Charges for Service</i>	<i>Building and Construction Permits</i>
001	1070	1	4120

2. Example of a revenue account coding for a capital CDBG grant received by the city for a new city hall.

Fund	Function	Type	Source
<i>Capital Project-CDBG</i>	<i>City Hall</i>	<i>Capital grants and contributions</i>	<i>Community Development Block grant</i>
301	6050	3	4405

REVENUES BY SOURCE

TAXES

Revenue Source	Revenue Types	
		General Property Taxes
4000	4	Property Taxes – Current
